

Myriad Connect & Share

Seamlessly stream multiple content within your home network

Myriad Connect & Share offers a fully integrated feature rich software suite that enables sharing of multimedia content anytime, anywhere. Music, photos and premium content can seamlessly be streamed between any device connected on the home network, including mobile devices, TVs, set-top boxes, games consoles and Blu-ray players.

Seamless Control of Multimedia Content

Connect & Share from Myriad enables users to manage and control multiple screens simultaneously, transforming the connected home experience.

Connect & Share enables users to stream a protected film from the set-top box to a mobile device, whilst at the same time stream a family video clip to the home PC via the same storage device. Both the premium and non-premium content can simply be controlled separately and simultaneously from the mobile device.

Screen Switching

Connect & Share, delivers a compelling experience leveraging real life use cases like screen switching.

Myriad Connect & Share opens up the home network, by enabling users the capability to switch between screens on any device within the home.

For example a user who is watching a film in the family living room can seamlessly switch the content to a second screen be it a tablet, TV or PC and continue viewing the film in another room without the need to pause or re-start the film.

Remote User Interface HTML5 Technology

Connect & Share from Myriad, utilises RUI HTML5 technology which enables a program guide or a control point's UI stored on the set-top box to be streamed and displayed on any client supporting Connect & Share, giving the client full control of the set-top box.

Thanks to Connect & Share RUI HTML5 technology, the convergence between TV and companion devices becomes a reality.

Access and Search Multimedia Content

The user can quickly and effectively search for local media content on the home network as well as web content and aggregate at the click of a button.

Connect & Share from Myriad transforms the user experience in the home, by leveraging DLNA and DTCP-IP standards.

Benefits

- **Highly Interoperable Solution** - enables seamless connectivity and interaction between third party DLNA devices
- **Increase Revenues** - ease of access to multimedia services, generates greater usage of premium content
- **Rich User Experience** - delivers quick and simple access to the user's multimedia content
- **Customer Engagement** - strengthens the relationship with users
- **Decrease Time To Market** - proven solution already validated in the market

Features

- **Supports all DLNA Device Classes** - Server (DMS), Renderer (DMR), Player (DMP), Controller (M-DMS), Media Server (M-DMS), Media Controller (M-DMS), Media Player (M-DMP), Media Upload / Download (M-DMU/D) without any disruption or the need to restart the multimedia content
- **Multiple Screens** - ability to stream both premium and non-premium content on multiple screens simultaneously within the connected home
- **Search Capabilities** - enables the user to seamlessly search all home network and web content via one simple UI
- **Protection DTCP-IP** - enables the user to stream and play premium content on DLNA devices in a secure environment
- **RUI HTML5** - enables a UI to be streamed from a RUI server to a RUI client, enabling the client to control the server
- **Screen Switching** - allows the user to simply switch and transfer content between devices
- **Supports Transcoding** - adapts the content to fit the renderers playing capabilities
- **Browser Plug** - enables the user to browse video streaming websites via their mobile device, then simply transfer the web video stream to any device within the home network

About Myriad

Myriad is chosen by leading OEMs and network service providers to power rich mobile social and web experiences - from the most basic to the smartest connected device through a single, scalable platform.

Today, over 2.5 billion mobile users rely on Myriad software. Myriad apps often provide users with their first taste of the Internet, and with our proven technology embedded in every Android device we are on target to help our partners power the next billion users.

We operate worldwide, with offices in Switzerland, France, UK, USA, Mexico, India, UAE, China, South Korea, Taiwan, Japan and Australia. Headquartered in Zurich Switzerland, Myriad is listed on the SIX Swiss Exchange (SIX Symbol: MYRN).
